DISCHARGE SUMMARY

NAME :

RALNMOTTEFUH , AEEN

UNIT NUMBER :

363-79-23

ADMISSION DATE :

01/04/96

DISCHARGE DATE :

01/10/96

FINAL DIAGNOSIS :

Cervical carcinoma ; bilateral ureteral obstruction secondary to the cancer .

Uremia .

Ileus .

OPERATION :

Bilateral ureteral stent placement .

HISTORY OF PRESENT ILLNESS :

This 78-year-old woman had stage IIIB carcinoma of the cervix and she has known periaortic and splenic metastases .

She was discharged from the hospital about 18 days prior to her admission , following a month long stay .

When her cancer was diagnosed , she underwent total abdominal hysterectomy and bilateral salpingo-oophorectomy and pelvic lymphadenectomy .

She had extensive disease of the uterus , ovarian tubes , omentum and the periaortic lymph nodes .

Postoperatively , she developed ileus , then finally she recovered and she was discharged to the nursing home .

She was readmitted because of a problem with uremia and high BUN and creatinine when she was seen in the office and the BUN and creatinine was ordered .

The BUN was 70 and creatinine was 4.6 and for this reason she had ultrasound of the kidney which showed bilateral hydronephrosis .

The patient was admitted to the hospital for ureteral stent placement .

On the day of admission , she was generally stable and she had no evidence of disease in the pelvis , no bleeding and no other abnormality .

HOSPITAL COURSE :

Dr. Jescdrig was called and a consultation was done and he placed bilateral ureteral stents in her kidneys .

Postoperatively , she diuresed very well .

She had dropped her BUN and creatinine to normal and she was found to have may be metastatic disease to her skin on the right paraumbilical area .

Because of her age and mental condition and the fact that she had cerebral atrophy , the decision was made for comfort unless she has any further problem and no further chemotherapy or treatment will be given .

The possibility that she may need to receive radiation therapy to this area to prevent her from getting further obstruction was also brought up .

Her family felt that at the present time , because her condition was no good , they would like to just take her home so that she could enjoy the quality of life .

Indeed , at the time of discharge she was conscious and she was cooperative and she was able to communicate very nicely with everyone including her family , exc

ept for the mental instability that she had because of her cerebral atrophy due to senility .

FOLLOW-UP :

She will be followed in the Centu Fairgmer Queen Medical Center .
