DISCHARGE SUMMARY

NAME :

GIENGBEENEA , NAA

UNIT NUMBER :

799-54-08

ADMISSION DATE :

12/13/2002

DISCHARGE DATE :

12/14/2002

ADMITTING DIAGNOSIS :

1. Undesired fertility .

2. Undesired adiposity .

HISTORY OF PRESENT ILLNESS :

The patient is a 30 -year-old Gravida III , Para II who presented desiring definitive surgical sterilization .

She was extensively counseled regarding other methods of birth control and desired to proceed with definitive surgical therapy .

In addition , the patient desired liposuction of varying areas as well .

The patient was consented for both procedures and brought to the Operating Room .

PAST MEDICAL HISTORY :

None .

PAST SURGICAL HISTORY :

Appendectomy at the age of 14 , open .

PAST OBSTETRIC HISTORY :

Spontaneous vaginal delivery x 2 .

PAST GYN HISTORY :

Regular menses , on Ortho-Tri-Cyclen .

No history of sexually transmitted disease , no history of domestic violence .

MEDICATIONS ON ADMISSION :

1. Ortho Tri-Cyclen .

ALLERGIES :

No known drug allergies .

PHYSICAL EXAMINATION :

Height 5 ' 1 " , weight 138 lb.

Blood pressure :

130/82 and heart rate 80 .

Breasts :

no masses .

Lungs :

clear to auscultation and percussion bilaterally .

Heart :

regular rate and rhythm , S1-S2 .

Abdomen :

soft , nontender , nondistended .

Extremities :

within normal .

Pelvic exam revealed normal vulva , vagina normal , cervix normal , uterus anteverted , small , nontender .

Adnexa :

no masses or tenderness .

Rectal :

deferred .

HOSPITAL COURSE AND TREATMENT :

The patient was admitted to the Operating Room where she underwent an unremarkable laparoscopic tubal ligation .

This was done with Falope rings .

The estimated blood loss was minimal and the patient received 600 cc. of intravenous fluid .

Of note , the patient had a negative urine pregnancy test prior to the surgery .

The patient then underwent liposuction of her abdomen , inner thighs , hips , flanks , chest and arms with Dr. Chain .

She did well and was admitted to the GYN Service postoperatively because the patient had persistent pain .

On postoperative day #one , she was then stable with no complaints .

She remained afebrile .

Her Foley was removed .

Her diet was advanced without difficulty and the patient was stable for discharge .

The patient was to follow up in several days time with Dr. Chain of the Plastics Clinic .

DISCHARGE MEDICATIONS :

Motrin and Percocet as needed .
