FOLLOW UP APPOINTMENT ( S ) :  
Your oncologist , No Known Allergies  
ADMIT DIAGNOSIS :  
breast cancer  
PRINCIPAL DISCHARGE DIAGNOSIS ; Responsible After Study for Causing Admission )  
Pleural effusion  
OTHER DIAGNOSIS ; Conditions , Infections , Complications , affecting Treatment  
/ Stay  
HTN NIDDM-DIET TL TONSILECT ATYPICAL CP OPERATIONS AND PROCEDURES :  
OTHER TREATMENTS / PROCEDURES ( NOT IN O.R. ) None  
BRIEF RESUME OF HOSPITAL COURSE :  
50 year old woman with metastatic breast CA with mets to lung and liver , with s  
everal days of light chest pressure , and also c/o puffiness in face .  
Got chest CT which ruled out SVC syndrome .  
Is here for rule out MI protocol , and will go home on Wednesday evening after 3  
rd set of enzymes available ; I told her goal time for going home is around 6 pm  
.  
She only has minimal c/o chest pressure now and her first set of enzymes was neg

ative .

Pt r/o for MI .

Her symptoms most likely 2nd to large pleural effusion that will be addressed as outpatient as per outpatient attending .

As we have an explanation for DOE , we though that w/u for PE not necessary .

ADDITIONAL COMMENTS :

If you have more shortness of breath , please contact your primary care physician / oncologist .

If you have chest pain , diaphoresis , nausea / vomiting , please return to emergency room .

No changes were made to your medication regimen .

DISCHARGE CONDITION :

Stable

TO DO / PLAN :

No medication changes done .

No dictated summary
